

# Sexual health data

### Sexual Health Profiles

Sexual Health Profiles have been developed in collaboration with the Health Protection Agency for each area in Cheshire & Merseyside. The profiles aim to provide a brief summary of the main sexual health issues facing the local population, to help inform the development of services across the patch. Detailed demographic information is presented for each of the main sexually transmitted infections, along with a spine chart of key sexual health indicators. [Please click here](#) and choose Key LA (Local Authority) Indicators or More LA Indicators to obtain sexual health data for each LA area.
